Being an ISO 9001: 2008 certified Company KIIDC propose to establish a quality management system, in order that its products or services meet the organization's objectives and at the same time meet the satisfaction of the client's quality requirements while complying with the existing regulations.

Quality control is an important concern of the project managers in any organisation. Defects or failures in constructed facilities can result in very large costs. Even with minor defects, re-construction may be required. Increased costs and delays are the result. Good project managers try to ensure the best quality control so that the job is done in the right way at the first time itself and that no major accidents occur on the project.

Hence this workshop proposes to discuss the essentiality of quality management in construction as well as methodologies in testing and inspection of materials and works related to construction. The workshop will be conducted in an interactive environment providing greater scope for discussions. Emphasis will be on a highly participative style of learning through Lectures, Group discussions, Case Studies and hands-on exercises.

TARGET PARTICIPANTS

Personnel working under KIIDC.

CERTIFICATE

On successful completion of continuous assessment during the course the participants will be awarded a certificate of participation by KIIDC.

FACULTY

Specialists with extensive experience in quality management and testing procedures will share the sessions.
